

DOUBLE DOWN ON DEFENSE DURING HULL SPLIT

One of the best tools a tree nut grower can have in their IPM program during hull-split sprays is **Double Nickel® biofungicide**.

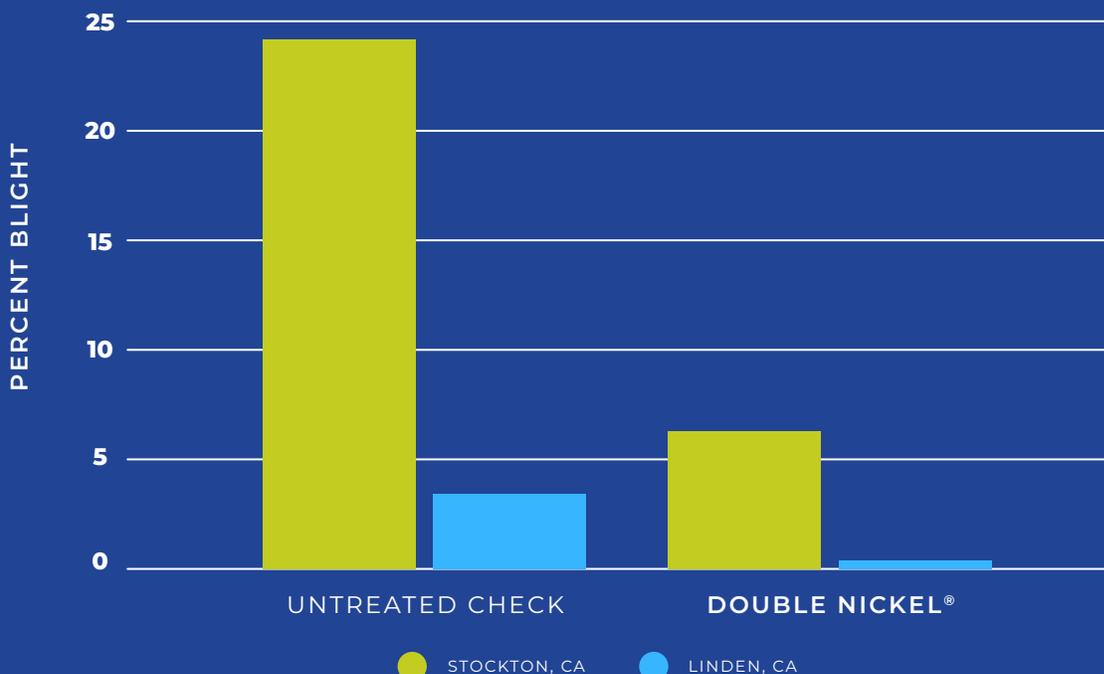

When a nut's protective hull starts to break open, it becomes exposed to pests and diseases.

A broad-spectrum biofungicide like Double Nickel can provide extra defense during this critical period.

With a more effective hull-split spray, you can protect profits and go into harvest free from pests and diseases.

NUMBERS DON'T LIE.

HERE'S HOW DOUBLE NICKEL HAS HELPED CONTROL WALNUT BLIGHT IN CALIFORNIA.
