

COMPETITIVE ADVANTAGE ON CUCUMBER CROPS

MeloCon®

BIOLOGICAL NEMATOCIDE

ACTIVE INGREDIENT

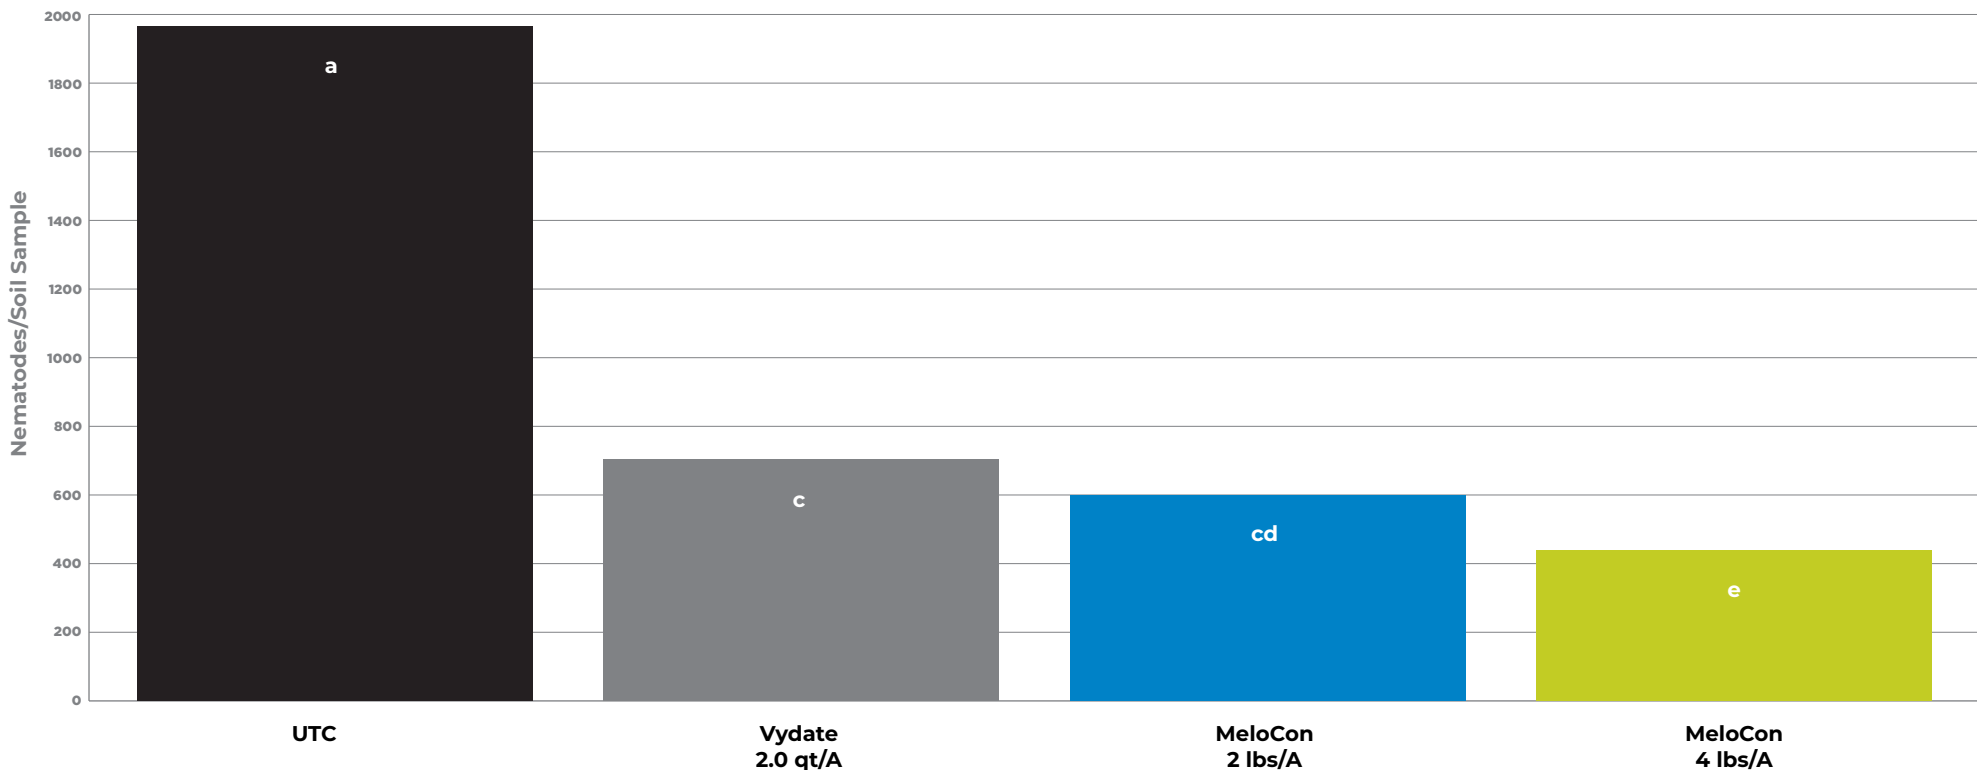

Paecilomyces lilacinus strain 251

When applied to cucumber crop, MeloCon resulted in fewer root knot nematodes per soil sample than synthetic chemical competitor.

MeloCon against Root Knot Nematodes 2017-143

Elm City, NC

Trial was inoculated with root knot nematode J2 egg solution one week after transplant.

VARIETY
Cross Country

TREATMENTS
A = 2 weeks before transplant
B = at transplant
C = 4 weeks after transplant

APP. VIA DRIP
12 in. emitter spacing,
0.5 gal/min/1000 linear ft,
water volume 0.5 irrigation/ac
